DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1 9, are drawn (combination) to a method of obtaining a quality image by the use of at least one biometric capacitive fingerprint sensor having a plurality of capacitive sensor cells arranged underneath a surface of dielectric material and each comprising at least one capacitor plate, for modulating any electromagnetic field generated at each capacitor plate in accordance with worst cleaning conditions of said surface of dielectric material, thereby obtaining a quality image with a correct contrast between ridge and valley of a detected fingerprint, classified in class 382, subclass 125.
- II. Claims 10 29, are drawn (subcombination) to a biometric integrated system including a biometric database, at least one biometric capacitive fingerprint sensor having a protection case, a swinging frame supported in said protection case and arranged to be angularly moved between an inoperative stand-by position and an operating position in which a fingerprint sensor is facing a user's finger, classified in class 382, subclass 126.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combination See MPEP § 806.05(c). In the instant case, the combination as claimed does not require the

Application/Control Number: 10/511,160

Art Unit: 2624

particulars of the subcombination as claimed because the details in the broadest subcombination claim 10 requires a protection case, a swinging frame supported in said protection case and arranged to be angularly moved between an inoperative stand-by position and an operating position in which a fingerprint sensor is facing a user's finger which is not recited in the combination claim 1. The combination has separate utility such as electromagnetic field generated at each capacitor plate in accordance with worst cleaning conditions of said surface of dielectric material, thereby obtaining a quality image with a correct contrast between ridge and valley of a detected fingerprint.

Page 3

- 3. Because these inventions are distinct for the reasons given above and the search required for group I is not required for group II, restriction for examination purposes as indicated is proper.
- 4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction were not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
- 5. Applicant is advised that ,the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.
- 6. The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election

Application/Control Number: 10/511,160

Page 4

Art Unit: 2624

shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention. If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

- 7. Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
- 8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Contact Information

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sheela C Chawan whose telephone number is. 571-272-7446. The examiner can normally be reached on Monday - Thursday 7.30 - 6.00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Werner P can be reached on 571-272- 7401. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
